Front Cover

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release the screw on the front cover.

2. Release four screws on the back of the front cover.

3. Remove the front cover.

4. Follow with the reversed steps to restore.

Seat

Tools Required: T-bend socket wrench, 10mm

Time: Allow 10 minutes for procedure

1. Release two nuts on the seat.

2. Remove the seat.

3. Follow with the reversed steps to restore.

Center Cover

Tools Required: T-bend socket wrench, 8mm

Time: Allow 10 minutes for procedure

1. Release the screw on the center cover.

2. Remove the center cover.

3. Follow with the reversed steps to restore.

Left Side Cover

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the center cover.
2. Release four screws on the left side cover.

4

3. Remove the left side cover.
4. Follow with the reversed steps to restore.

Right Side Cover

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release the screw on the cover.

2. Remove the cover.
3. Release four screws on the right side cover.
4. Remove the right side cover.

Footrest Board

Tools Required: T-bend socket wrench, 10mm

Time: Allow 10 minutes for procedure

1. Release four screws on the footrest board.

6

2. Remove the footrest board.
3. Follow with the reversed steps to restore.

Tail Bracket

Tools Required: Y-bend socket wrench, 10mm; hex-key wrench, 6mm

Time: Allow 10 minutes for procedure

1. Release the screw on the tail bracket.

2. Release two nuts on the tail bracket.
3. Remove the tail bracket.
4. Follow with the reversed steps to restore.

Rear Body Cover

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release four screws on the rear cover.

2. Remove the plastic cover on the seat lock.
3. Release the 6-pin connector and 2-pin connectors.
4. Remove the rear cover.
5. Follow with the reversed steps to restore.

Lower Cover

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the footrest board and release the screw on the front of the lower cover.

2. Remove the lower cover.
3. Follow with the reversed steps to restore.

Fairing

Tools Required: T-bend socket wrench, 8mm

Time: Allow 10 minutes for procedure

1. Remove the footrest board and the hanger on the back of the fairing.

10

2. Remove the fairing.
3. Follow with the reversed steps to restore.

Front Fender

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release three screws on the rear front fender.

2. Release the screw on the top of the rear front fender and remove.

3. Follow with the reversed steps to restore.

Rear Fender

Tools Required: Phillips screwdriver
Time: Allow 10 minutes for procedure

1. Remove the right and left side covers and release two screws on the rear fender.

12

2. Remove the rear fender.
3. Follow with the reversed steps to restore.

Head Lamp Bulb

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release the screw on the head lamp ring.

2. Release the head lamp ring.
3. Release the spring on the bulb base.
4. Remove the bulb base and replace the bulb.
5. Follow with the reversed steps to restore.

Front Direction Lamp Bulb

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release the screw on the base of the direction lamp.

- 14 2. Release the screw on the cover of the bulb.

3. Replace the bulb and follow the reversed steps to restore.

Tail Lamp Bulb

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release two screws on the tail lamp cover and remove.

2. Replace the light bulb.
3. Follow the reversed steps to restore.

Rear Direction Lamp Bulb

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release the screw on the base of the direction lamp.

2. Remove the cover of the direction lamp.
3. Replace the bulb and follow the reversed steps to restore.

Main Switch

Tools Required: T-bend socket wrench, 10mm

Time: Allow 10 minutes for procedure

1. Remove front covers.
2. Release the 4-pin connector.

3. Release two screws on the main switch and remove the key switch.

4. Follow with the reversed steps to restore.

Seat Lock Assembly

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the rear body cover.
2. Remove the seat box rim.
3. Release two screws on the seat lock.

18

4. Release two screws on the seat lock switch.

5. Remove the seat lock and seat lock switch.
6. Follow with the reversed steps to restore.

Horn

Tools Required: Open-end wrench, 10mm

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release two connectors on the horn.
3. Release the screw on the horn.

4. Follow with the reversed steps to restore.

Flasher Relay

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release the 2-pin connector on the flasher relay.

3. Follow with the reversed steps to restore.

DC to DC Converter

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the side covers and footrest board.
2. Release the 4-pin connector for the converter.
3. Release three screws on the converter.

4. Follow with the reversed steps to restore.

Controller

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the right side cover.
2. Release connectors of controller wire harness.
3. Release the copper nut throttle cable and remove (replace with nail to prevent pillar drawing back).

4. Release four screws on the controller, cut off band.

5. Follow with reversed steps to restore.

Rear Shock Absorber

Tools Required: T-bend socket wrench, 10mm

Time: Allow 10 minutes for procedure

1. Remove the rear body cover.
2. Release two screws on the rear shock absorber.

3. Follow with the reversed steps to restore.

Rear Caliper

Tools Required: Box wrench; Y-bend socket wrench, 12mm

Time: Allow 10 minutes for procedure

1. Release the screw on the rear caliper. Avoid leaking fuel onto the pad.

24

2. Release the screw on the pad.
3. Release two mounting screws on the caliper.
4. Follow with the reversed steps to restore.

Brake Master Cylinder

Tools Required: Box wrench, 12mm; hex-key wrench, 5mm

Time: Allow 10 minutes for procedure

1. Check the fluid in reservoir for refuel or replace the brake fluid.
2. Replace reservoir if leakage occurs, or if gasket fails or wears out.
3. Release the screw on the brake hose.

4. Release two screws on the reservoir.
5. Release two connectors and remove the master cylinder.

6. Follow with the reversed steps to restore.

Brake Hose

Tools Required: Box wrench; diagonal cutting pliers

Time: Allow 10 minutes for procedure

1. Remove all the covers and fenders.
2. Release the screw on the brake hose of the rear caliper. Avoid leaking fuel onto the pad.
3. Release the screw on the brake hose of master cylinder.

4. Cut off the band on the brake hose and remove.
5. Follow with the reversed steps to restore.

Brake Fluid

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Release two screws on the cover of the master cylinder.

2. Place tube and fluid vacuum on the rear caliper's screw.
3. Pour brake fluid into the master cylinder.
4. Release the screw on the rear caliper and operate the fluid vacuum.
5. Pull the brake lever several times. Ensure brake is functioning normally and brake hose is free of air.
6. Restore cover of master cylinder.

Brake Pad

Tools Required: Y-bend socket wrench, 12mm

Time: Allow 10 minutes for procedure

1. Release the screw on the rear caliper.
2. Remove the rear caliper.

3. Remove the brake pad from the base of the caliper.
4. Follow with the reversed steps to restore.

Direct Driven Hub-Motor

Tools Required: Phillips screwdriver; open end wrench, 24mm

Time: Allow 10 minutes for procedure

1. Release three screws on the motor cord cover.

2. Cut off the band.
3. Release the black connector of the motor cord.
4. Remove the rear caliper.
5. Release two nuts for the motor shaft.
6. Remove the orientation boards.
7. Remove the motor.
8. Follow with the reversed steps to restore.

Brake Disk

Tools Required: Hex-key wrench, 6mm

Time: Allow 10 minutes for procedure

1. Remove the motor from the frame.
2. Release three screws on the brake disk.

30

3. Remove the brake disk.
4. Follow with the reversed steps to restore.

Rear Fork

Tools Required: Box wrench, 17mm

Time: Allow 10 minutes for procedure

1. Remove the rear caliper, rear motor, and rear shock absorber.
2. Cut off the band on the brake hose and release the screw on the rear fork.

3. Remove the rear fork.
4. Follow with the reversed steps to restore.

Front Shock Absorber

Tools Required: Phillips screwdriver; Y-bend socket wrench, 12mm

Time: Allow 10 minutes for procedure

1. Remove the front fender.
2. Release the screw on the front fork cover and remove.

32

3. Release two screws on the front shock absorber and remove.

4. Follow with the reversed steps to restore.

Head Lamp

Tools Required: Box wrench, 14mm

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release the 6-pin connector.

3. Release the screw on the head lamp holder.

4. Follow with the reversed steps to restore.

Front Direction Lamp

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release the 2-pin connector on the front direction lamp (Green, left; red, right).

34

3. Release the screw on the handle switch and remove the direction lamp.
4. Follow with the reversed steps to restore.

Current Meter and Speedometer

Tools Required: T-bend socket wrench, 8mm

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release the 6-pin connector and the 2-pin connector on the meters.

3. Release two screws on the instrument panel.

4. Release the nut for the speedometer and remove the instrument panel.
5. Follow with the reversed steps to restore.

Left Handle Switch

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release all connectors for the left handle switch.

36

3. Release two screws on the left handle switch.

4. Follow with the reversed steps to restore.

Right Handle Switch

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release all connectors for the right handle switch.

3. Release two screws on the right handle switch.

4. Follow with the reversed steps to restore.

Tail Lamp Assembly

Tools Required: Open-end wrench, 10mm

Time: Allow 10 minutes for procedure

1. Remove the rear fender.
2. Release the three screws on the base of the tail lamp assembly.

38

3. Release all connectors for the tail lamp assembly.

4. Follow with the reversed steps to restore.

Front Brake Cable

Time: Allow 10 minutes for procedure

1. Remove the front cover.
2. Release the adjusting bolt on the brake cable and pull out the brake cable

3. Remove the brake cable from the brake cable head.

4. Follow with the reversed steps to restore.

Throttle Cable

Tools Required: Phillips screwdriver

Time: Allow 10 minutes for procedure

1. Follow page 22 (step 1 to step 3) to pull the throttle pillar out.
2. Follow page 37 (step 1 to step 3) to remove the handle switch.
3. Remove the throttle cable head on the handle grip.

4. Release the screw on the right handle switch.

5. Remove the throttle cable.
6. Follow with the reversed steps to restore.

Handle

Tools Required: hex-key wrench (5mm)

Time: Allow 10 minutes for procedure

1. Remove the instrument panel, handle switches (right and left) and brake master cylinder.
2. Release four screws on the handle Clamp.

3. Remove the handle.
4. Follow with the reversed steps to restore.

Steering Bracket

Tools Required: Phillips screwdriver, box wrench (14mm)

Time: Allow 10 minutes for procedure

1. Remove handle.
2. Release the screw on the steering bracket cover.

3. Remove the steering bracket cover.
4. Release the screw on the steering bracket.

5. Remove the steering bracket.
6. Follow with the reversed steps to restore.

Front Fork and Ball Race

Tools Required: open-end wrench (32mm, 45mm)

Time: Allow 10 minutes for procedure

1. Remove front covers, instrument panel, head lamp, handle and steering bracket.
2. Remove front wheel.
3. Release the nut on the ball race and check the steel balls to see if they are missing.
4. Properly adjust the front fork clearance and follow with the reversed steps to restore.
